

Lesson 19: Inference for Several Proportions, Goodness-of-Fit, and Independence

Homework

Solutions

Please note that the steps show rounded numbers, but that the final answers to the problems are calculated without rounding.

Problem	Part	Solution
1	-	The requirements are met because all expected counts are greater than or equal to five

2	-	
3	-	H_0 : Religiosity and frequency of anger are independent
		H_a : Religiosity and frequency of anger are not independent
4	-	$\chi^2 = 23.474$
		$df = 4$
5	-	P-value = 0.0001
6	-	reject the null hypothesis
7	-	There is sufficient evidence to suggest that religiosity and frequency of anger at something beyond one’s control are not independent.
8	-	The requirements are met because all expected counts are greater than or equal to five

- 9 -
- 10 - H_0 : Family structure and whether a girl goes to college are independent
- 11 - H_a : Family structure and whether a girl goes to college are not independent
- 12 - $\chi^2 = 10.357$
- 13 - $df = 3$
- 14 - P-value = 0.016
- 15 - reject the null hypothesis
- 16 - There is sufficient evidence to suggest that family structure and whether a girl goes to college are not independent
- 17 - The requirements are met because all expected counts are greater than or equal to five

- | | | |
|----|---|---|
| 16 | - | |
| 17 | - | H_0 : Gender and PhD status are independent |
| | | H_a : Gender and PhD status are not independent. |
| 18 | - | $\chi^2 = 1.932$ |
| | | $df = 2$ |
| 19 | - | P-value = 0.381 |
| 20 | - | fail to reject the null hypothesis |
| 21 | - | There is insufficient evidence to conclude that a student's gender and status in a PhD program are not independent. |
-
