## Lesson 19: Inference for Several Proportions, Goodness-of-Fit, and Independence

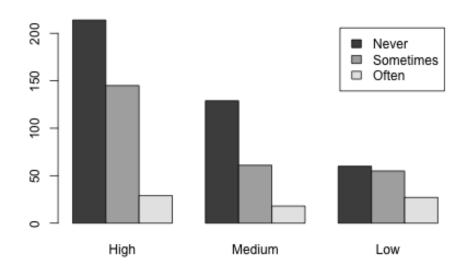

## Homework

## Solutions

8

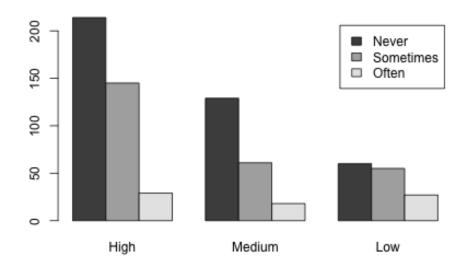

Please note that the steps show rounded numbers, but that the final answers to the problems are calculated without rounding.

Problem	Part	Solution
1	_	The requirements are met because all expected counts are greater than or equal to five

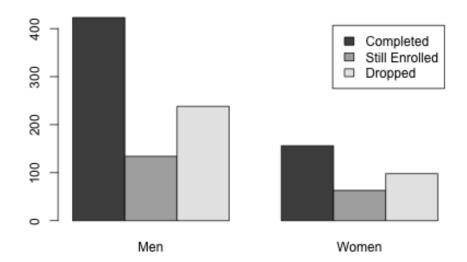

The requirements are met because all expected counts are greater than or equal to five

2 -  $H_0$ : Religiosity and frequency of anger are independent  $H_a$ : Religiosity and frequency of anger are not independent 4 -  $\chi^2 = 23.474$  df = 45 - P-value = 0.0001
6 - reject the null hypothesis
7 - There is sufficient evidence to suggest that religiosity and frequency of anger at something beyond one's control are not independent.

9	-	
10	-	$H_0$ : Family structure and whether a girl goes to college are independent
		$H_a$ : Family structure and whether a girl goes to college are not independent
11	-	$\chi^2 = 10.357$
		df = 3
12	-	P-value = 0.016
13	-	reject the null hypothesis
14	-	There is sufficient evidence to suggest that family structure and whether a girl goes to
		college are not independent
15	-	The requirements are met because all expected counts are greater than or equal to five

16	-	
17	-	$H_0$ : Gender and PhD status are independent
		$H_a$ : Gender and PhD status are not independent.
18	-	$\chi^2 = 1.932$
		df = 2
19	-	P-value = $0.381$
20	-	fail to reject the null hypothesis
21	-	There is insufficient evidence to conclude that a student's gender and status in a PhD
		program are not independent.
